Identified Software Problems:

Input/Action Causing Failure	Location of Fault (if known)	Possible Action for Removal of Fault
Navbar on all the pages is not responsive. In smaller windows or mobile devices the navbar will not resize properly and may lose functionality.	The Navbar is located on the Dashboard, Favorites, Post Details, Post Create Profile, and Edit Profile/ Settings.	CSS that accounts for different or multiple size windows or screen
Registering a username that already exists throws an exception rather than an error message.	Register form is located in sign up page.	Manual check of existing usernames in database when a new user is created, rather than calling django's create_user without checking the username input
Password_reset Email template is not configured properly	Reset Password in urls.py	Create a template for e-mail to be sent to user when they reset their password and pair it to reset url in urls.py
Liking a post updates the post's Updated Timestamp	Liking is located in the Dashboard page, Favorites page.	Update the "time updated" field to no longer be automatically updated by Django. Only update this field when an the post is edited by the author user (a backlog item).
One e-mail can be reused for multiple accounts	Register form is located in sign up page.	Iterate through all the users in the database and access their email. If entered email already exists for another User then display a user-friendly error.
Long post titles, descriptions, and tags will go out the container and past the screen	Register, Login, and Post form. All the text fields.	Set up the max_length for each of text field in models.py.
